SUMMARY

Software Engineer building production mobile and AI-powered products used by real customers on Google Play and the Apple App Store. Ship end-to-end features with Clean Architecture, offline-first data layers, real-time distributed systems, and streaming AI. Comfortable across the stack, from backend integrations and secure storage to automated testing and iOS + Android CI/CD. Own features from stakeholder brief through debugging and store delivery, collaborating cross-functionally with product, design, and backend teams.

EXPERIENCE

Mobile Engineer | MOONTIJ, Saudi Arabia *Oct 2025 - Present*

Corteksa CRM: Enterprise CRM with dynamic business objects, real-time analytics, streaming AI, multi-tenant workspaces, and multi-channel messaging. · [Google Play](#) · [App Store](#)

- Built a metadata-driven rendering engine for dynamic business objects (Tables, Kanban, Forms, Detail views) with 15+ field types and workspace-scoped views, cutting feature delivery time by 70%.
- Shipped multi-channel messaging (WhatsApp, Instagram, Messenger, TikTok) with voice notes, signed-URL media uploads, and three always-on WebSocket channels processing 10,000+ messages daily.
- Built a streaming AI assistant with rich content blocks (charts, gauges, tables, funnels), tool execution, and human-in-the-loop confirmation over WebSocket.
- Implemented FCM push notifications with platform-native channels, deep-link routing, and in-notification replies, lifting response rate by 35%.
- Designed a secure auth layer with Google Sign-In, encrypted storage on Android KeyStore and iOS Keychain, safe token refresh, and multi-tenant data wipe on logout.
- Built an offline-first data layer with local SQLite, reactive queries, and an outbox pattern so users work seamlessly through poor connectivity.
- Wrote 1000+ automated unit and integration tests covering auth, mutations, message parsing, and real-time event handling.
- Delivered a single CI/CD workflow that builds and publishes iOS to TestFlight and Android to Google Play in one run at 99.2% crash-free sessions.

Software Engineer | Weblayer, Istanbul, Turkey *Jan 2024 - Jul 2025*

- Shipped mobile apps across B2B marketplace, CRM, and employee-management verticals, owning features solo from stakeholder brief to release.
- Built production features end to end: authentication, payment integration, real-time WebSocket messaging, multilingual support, and API-driven dashboards.
- Owned an internal ICRM with Kanban task tracking, camera-based attendance, real-time messaging, and permission-scoped dashboards.
- Established Clean Architecture and BLoC as team standards, onboarding teammates and leading debugging sessions.

SHIPPED PRODUCTS

Mwaqi3 | Arabic-first business directory shipped for a Kuwait client

Discover, verify, and connect with local businesses across Kuwait and the Middle East. Story-first home, offers CRUD (owner + consumer), Arabic/English RTL, Google Maps, Firebase Messaging, and a custom design system. · [Play Store](#)

Recallly | Voice-to-CRM native Android app in Kotlin

Real-time voice transcription, AI-powered field extraction, offline speech recognition, role-based modes (Sales, Field Engineer, Insurance), PDF export, Google Calendar integration. Multi-language (EN/AR/ES/TR). · [Play Store](#)

EDUCATION

Üsküdar University | B.Sc. Software Engineering | GPA: 3.56/4.0 | Graduated 2025

TECHNICAL SKILLS

Languages: Dart, Kotlin, Java, Python, SQL, JavaScript

Frameworks & Platforms: Flutter, Native Android (Kotlin), Java Spring Boot, Firebase, Supabase

Architecture: Clean Architecture, MVVM, BLoC/Cubit, SOLID, Multi-tenant, Offline-first

Testing: Unit, Widget, Integration Testing, TDD

Security: AES Encryption, KeyStore, Keychain, Token Management, Multi-tenant Isolation

Infrastructure: REST APIs, WebSockets, FCM, CI/CD, Docker basics

Spoken Languages: English (Fluent), Arabic (Native)
